RESUME

Software Engineering Student

Studying Software Engineering at VIA University College — and already shipping a marketplace app, client websites and team projects on the side.

Profile

Full-stack developer and founder of Tackly, a marketplace app built in React Native on Supabase. I've worked across the whole stack — from database design and REST APIs in Spring Boot and .NET to React front-ends — and I'm at my best where technical decisions meet what users actually need.

I enjoy the people side of software just as much — turning wishes into clear requirements and keeping a team moving in the same direction, as I did as Product Owner on LearnHub.

Technical skills

PROGRAMMING LANGUAGES

Java C#
Python
JavaScript
TypeScript
PowerShell

WEB & FRAMEWORKS

React
React Native
Expo
Spring Boot
.NET JavaFX
Node.js Vite
HTML5 CSS3

DATABASES & TOOLS

SQL
PostgreSQL
Supabase
REST APIs
gRPC Git
DataGrip

METHODS & ROLES

Agile / Scrum
Product Owner
Team leadership
Stakeholder communication

Personal strengths

FAST LEARNER

I went from HTML one-pagers to a full-stack mobile app, picking up React Native and Supabase along the way. "Learning by doing" is the true philosophy.

ORGANISER & TEAM PLAYER

I like helping a group work well together: A clear plan, clear roles and a good atmosphere. I learned a lot of that organizing raid nights for 25 people, and it's what made the Product Owner role feel natural to me. I do not stop working on something with my name-print on, before I'm satisfied - even if I'm the one who has to shoulder the heavy burden. A perfectionist, some might say!

COMMUNICATOR

I can translate various technical problems into language every stakeholder understands — a skill sharpened supporting PayPal's international customers and in my everyday life.

CALM UNDER PRESSURE

Educated rescue specialist, so a failing build or a tight deadline doesn't rattle me. I take ownership and keep a cool head to make the best of a given situation.

Experience

Founder & Full-stack Developer

Own business · Tackly

2026 – present

- Building a peer-to-peer marketplace for equestrian equipment: an Expo / React Native mobile-app.
- Built a separate React admin panel for moderation, support and role-based access.
- Already launched on Google Play, the App Store is next!

Freelance Web Developer

Hos Qilej · barbershop in Roskilde

Client project

- Designed and built the shop's website: services, prices, opening hours and integrated online booking.

Product Owner

LearnHub · VIA University College, 2nd semester

Spring 2026

- Owned the backlog, requirements and progress for a team of four building a Spring Boot and React learning platform.
- Received great feedback from fellow students and teachers.

Education

Professional Bachelor in Software Engineering (Engineering Trainee)

VIA University College · online / flexible model

2025 – present

- Focus: full-stack development, object-oriented programming, databases, software architecture and agile methods.
- Currently on 3rd semester: C# & .NET, building a CPU in DigiSim, and algorithms & complexity.
- Trainee model: online teaching lets me work around two days a week in a company and write my semester and bachelor projects in its technologies.

Before tech

Firefighter & Rescue Specialist (national service)
Danish Emergency Management Agency
Feb 2024 – Oct 2024

Healthcare & service sector
Roskilde Hospital, Roskilde Municipality and others
2021 – 2025

Technical Customer Service Agent
PayPal (Concentrix) · Belfast
Nov 2019 – Feb 2020
